

# EMBRACE THE FUTURE.

The future of trading desks has arrived. **TRANSACTION™**, the latest technical desking system from the Mayline Group, is poised to set the trading world on its ear. Featuring an **EDGY**, retro aesthetic combined with design elements that support the latest in trading technology, TransAction answers the call for those who demand space **EFFICIENCY, FLEXIBILITY, and AFFORDABILITY.**

TransAction **BREAKS DOWN** the paradigm that trading desks need to be big and bulky, housing the technical equipment within hard-to-reach compartments. TransAction allows flat-panel displays, turret phone systems, CPU towers, and all the associated wiring and cabling, plenty of room to maneuver within an **OPEN, EASY-TO-ACCESS** design. All of this is done within a compact footprint requiring as much as **25% LESS REAL ESTATE** but providing up to **50% MORE WORK SURFACE** than traditional trading desk systems. Best of all, TransAction **COSTS UP TO 50% LESS** than those big, bulky, hard-to-use trading desks of the past.

The Future has Arrived.

**TRANSACTION™**

Surface panels are easily removed providing access to cables, cords, voice/data jacks, and power sources.

Design details in base components blend with even the most conservative or contemporary environments.

# TRANSACTION™

## FEATURES

Workstations are offered in both single- and dual-sided configurations. Adjoining stations share a common leg in order to maximize under-surface clearance.

Dual-sided stations measure only 54" in depth while single-sided stations measure 30" in depth. This compact design requires as much as 25% less space versus traditional trading desk stations.

Select from a wide variety of work surface finishes and edge profiles. Choice of either vacuum formed membrane tops with seamless contoured edging or high-pressure laminate with durable soft-edge fronts and PVC edge-banded sides.

End panels come in standard designs, or can be customized. Designers are given the freedom of expression to create a unique "signature" look.

Flat panel displays are supported using articulating mounting clamps, designed to detach quickly when a display goes down.

Surface panels with standard brush grommets can be easily removed to gain access to TransAction's expansive cable management trough. Cables and wires can be serviced while standing rather than having to crawl underneath the station.

During typical use, the surface panels also act as usable work surface, increasing each user's surface area by as much as 50% over traditional trading desks.
